

Optoma's HD70 720p Home Theater Projector Displays Versatility, Incredible Color and Amazing Image Quality
At a Sub-\$1000 Price Point – The HD70 Offers True HD for Everyone

Las Vegas (January 8, 2007) – Optoma, one of the leading manufacturers of digital projection and display devices, today showed the versatility and flexibility of a home theater projector with the HD70. The HD70, the company's new portable 720p resolution home theater projector, offers outstanding functionality and value.

Because the native resolution of the HD70 home theater projector runs at 720p, the HD70 can be the ideal display option for today's high-end entertainment devices. From video game console systems and fast-running PCs to connecting to digital satellite or cable, today's high-definition content can be seen in its true form – on a large screen. The HD70 delivers video game images and the latest sports playoff games up to 300-inches (diagonal).

The HD70 features a DarkChip2™ DLP® DMD chipset from Texas Instruments and a 4000:1 contrast ratio with Optoma's proprietary ImageAI™ technology, which allows the HD70 to deliver incredible color saturation and subtle details for amazing image quality. The Optoma HD70 provides a great, all-around projected picture for home theater enthusiasts.

At 1000 lumens and a native 16:9 aspect ratio, the HD70 also offers digital horizontal and vertical keystone correction, whisper-quiet 28dB operation, as well as a plethora of connection ports. The HD70 also highlights Texas Instruments' BrilliantColor™ color processing technology to deliver higher brightness and provide truer, more vibrant colors to the projected picture.
